IS YOUR DRINKING WATER SAFE, WHY WATER TESTING.....?

In Bengaluru, a majority of the people rely on either Cauvery water supply, private bore wells or tankers. A superior quality of water is crucial to our economic, health, and social well-being.
Monitoring the quality of your water and testing it regularly is very important for maintaining good health and eliminating the risk of illnesses related to water contamination especially because the character of water frequently changes due to rains, overflowing drains, leaking sewage pipes & damaged septic tanks

GET OUR SERVICES

The Basic Water Testing Panel

Physical Tests
- pH
- Colour
- Turbidity
- Total Dissolved Solids (TDS)

Chemical Tests
- Total Hardness
- Calcium
- Magnesium
- Alkalinity
- Fluoride
- Iron
- Nitrate
- Chloride
- Sulphate

Microbial Tests
- E Coli
- Total Coliform

**These tests take 3-5 working days.
Cost of the panel is Rs.1500 + 18% GST + Collection charges as applicable.

- **The objective of doing the physical tests is to verify the physical condition of the water specifically with respect to its appearance and character which if adverse will cause a negative impact vis-a-vis taste and feel as we drink it.**
- **The chemical tests indicate the presence of chemical pollutants in the water which will have an adverse effect on the physiological systems on the human body.**
- **The microbiological tests indicate the presence or absence of bacteria which cause illness like typhoid, cholera, dysentery, throat infections, fever etc.. primarily due to the sewage contamination.**

The Detailed Water Testing Panel

In addition to the basic panel this includes heavy metals like
Lead, Mercury, Arsenic, Chromium, Nickel, Copper, Cadmium, Aluminum, Zinc, Manganese
The presence of heavy metals in drinking water is extremely unsafe as most are carcinogenic and neuro-toxins.

**These tests take 10-15 working days.
Cost of the panel is Rs.4500.00+ 18% GST + Collection charges as applicable
